

# Calling all Irish Setter owners...

## Help our research into canine idiopathic epilepsy

UNIVERSITY OF CAMBRIDGE

LINNAEUS

**Do you have an Irish Setter that:**

...has been diagnosed with idiopathic epilepsy?

or

...is unaffected by epilepsy AND over 8 years old?

If so, your participation would greatly help our research. You will also be helping future generations of Irish Setters. For more information, please contact the Canine Genetics Centre at the University of Cambridge:

## EPILEPSY RESEARCH

Earlier this year we told you about new funding the Dr. Sally Ricketts had secured, in collaboration with Linnaeus Veterinary and the University of Helsinki, to extend our epilepsy research into FIVE new at-risk breeds - the Beagle, English Springer Spaniel, Giant Schnauzer, Hungarian Vizsla and Irish Setter.

We have been actively recruiting samples from case and control dogs over the last 6 months ready to send for whole genome sequencing (WGS) and last month our spotlight was on the English Springer Spaniel where you were all amazing in your help, thank you! Now it's the turn of the Irish Setter as we need more samples please?

Do you have a setter that ...  
... has been diagnosed with idiopathic epilepsy  
OR  
... is over 8 years old AND unaffected by epilepsy?

If so, please contact the team to get involved and help with our research - <https://www.canine-genetics.org.uk/research/epilepsy/>
